

Tablas de Mortalidad de la Población Española por Comunidades Autónomas. Años 1970, 1975 y 1980

INE

Madrid, 1988

Periodo de referencia: 1969-1972

Defunciones: Flujos de fallecidos por sexo y grupo de edad del fallecido, que recoge anualmente el **Movimiento Natural de la Población** de los años 1969 a 1972, para la tabla referida a 1970. (pág.-8)

Observaciones: (1) Antes de 1975 el concepto de nacido vivo se asimila al concepto de nacido legal. No obstante en esta tabla se han hecho los ajustes correspondientes para asegurar la homogeneidad.
(2) Antes de 1975 los fallecidos se asignan a la provincia en la que se producen, a partir de 1975 se refieren a defunciones de personas que tenían la residencia fijada en la provincia. Esto afecta a la homogeneidad de resultados por CCAA.

Población: Población a 31 de diciembre de 1970.
Fuente: **Censo de Población** de 1970.

Nota: La página 7 cita las **Tablas de Mortalidad Provinciales de 1970**.

Nota: No existen las Tablas de Mortalidad para Ceuta y Melilla en 1970 por no disponerse de datos (pág.-23).

Nota: Error tipográfico el L(X) - Andalucía - Población Total - Edad 0 dice 85.000 es 100.000

Error tipográfico el L(X) - Andalucía - Sexo Masculino - Edad 0 dice 85 es 100.000

Error tipográfico el T(X) - Islas Baleares - Sexo Femenino - Edad 0 dice 0,977810 es -

Error tipográfico el T(X) - Islas Baleares - Sexo Femenino - Edad 1-4 dice - es 0,996681

Tablas de Mortalidad de la Población Española por Comunidades Autónomas. Años 1970, 1975 y 1980

INE

Madrid, 1988

Periodo de referencia: 1974-1977

Defunciones: Flujos de fallecidos por sexo y grupo de edad del fallecido, que recoge anualmente el **Movimiento Natural de la Población** de los años 1974 a 1977, para la tabla referida a 1975. (pág.-8)

Población: Población a 31 de diciembre de 1975.
Fuente: Padrón de Habitantes de 1975 con varios ajustes debido a la sobrevaloración del mismo.
Se ajustaron los totales provinciales de acuerdo con el método descrito en **Evolución de la Población Española durante el periodo 1961-1978**. La estructura por sexo y edad del Padrón de 1975 se respeta por aplicación del método RAS para el reparto por edades, en cada sexo, de las diferencias existentes en cada provincia. (pág.-8)

Nota: En la Población de mujeres existen dos observaciones atípicas que hacen que el Total Nacional no cuadre con la suma por CCAA por una magnitud importante:
(1) En el Grupo de Edad 45-49 por 19.999 personas.
(2) En el Grupo de Edad 75-79 por 36 personas.
Este error no ha sido descubierto ya por Grupos de Edad dentro de cada CCAA las cifras si cuadran.

TABLAS DE MORTALIDAD 1980-81.

CCAA

Tablas de Mortalidad de la Población Española por Comunidades Autónomas. Años 1970, 1975 y 1980

INE

Madrid, 1988

Periodo de referencia: 1980-1981

Defunciones: Cifras desagregadas por CCAA empleadas en el cálculo de las funciones de las **Tablas de mortalidad de la población española 1980-1981**, es decir, las cifras de defunciones de los años 1980 y 1981, pero disponiendo en esta ocasión de resultados definitivos para este último año. (pag.-8)

Población: Población a 31 de diciembre de 1980.
Fuente: Censo de Población de 1981 fechado a 1 de marzo de 1981 ajustado por las defunciones registradas en los meses de enero y febrero de 1981. (pág.-9)

Tablas de Mortalidad de la Población Española. Años 1985 y 1990

Resultados por Comunidades Autónomas.

INE Madrid, 1997

Periodo de referencia: 1985-1986

Defunciones: Flujos de defunciones clasificadas por CCAA de residencia, sexo y grupo de edad del fallecido, del **Movimiento Natural de la Población** de los años 1985 y 1986, para la tabla referida a 1985. (pág.-15)

Población: Población a 31 de diciembre de 1985.
Fuente: estimaciones intercensales obtenidas entre los censos de población de 1981 y 1991, **Evolución de la Población de España entre los Censos de 1981 y 1991**. INE. Madrid 1986.

Tablas de Mortalidad de la Población Española. Años 1985 y 1990

Resultados por Comunidades Autónomas.

INE Madrid, 1997

Periodo de referencia: 1990-1991

Defunciones: Flujos de defunciones clasificadas por CCAA de residencia, sexo y grupo de edad del fallecido, del **Movimiento Natural de la Población** de los años 1990 y 1991, para la tabla referida a 1990. (pág.-15)

Población: Población a 31 de diciembre de 1990.
Fuente: Censo de Población de 1991 fechado a 1 de marzo de 1991 ajustado por las defunciones registradas en los meses de enero y febrero de 1991. (pág.-15)

Tablas de Mortalidad de la Población Española. 1994 y 1995

Resultados por Comunidades Autónomas.

INE Madrid, 1999

Periodo de referencia: 1994-1995

- Defunciones:** Flujos de defunciones clasificadas por CCAA de residencia, sexo y grupo de edad del fallecido, del **Movimiento Natural de la Población** de los años 1994 y 1995. (pág.-15)
- Población:** Población a 31 de diciembre de 1994.
Fuente: Proyecciones de población elaboradas por el INE a partir del Censo de 1991,
Proyecciones de la Población de España calculadas a partir del Censo de 1991. INE. Madrid 1995.

Tablas de Mortalidad de la Población de España. 1998-1999.

Resultados por Comunidades Autónomas.

INE Madrid, 2002

Nota: Obtenida en PC-Axis de la página web del INE.
También existe publicada en papel.

Periodo de referencia: 1998-1999

Defunciones: Flujos de defunciones clasificadas por CCAA de residencia, sexo y grupo de edad del fallecido, del **Movimiento Natural de la Población** de los años 1998 y 1999.

Población: Población a 31 de diciembre de 1998.
Fuente: Revisión de las proyecciones de población calculadas a partir de los resultados del Censo de de población de 1991.
Proyecciones de la Población de España calculadas a partir del Censo de Población de 1991. Evaluación y revisión. INE. 2001.

Nota: Existe un resultado anómalo en $T(x)$ de Ceuta y Melilla para la edad 5-9 como consecuencia del hecho de que existen dos valores consecutivos de ceros en las defunciones en los intervalos 5-9 y 10-14. El valor mecánico procedente del cálculo daría 1.000040 que debería ser truncado a 1 al tratarse de una probabilidad.
En realidad el cálculo debería acotar $LL(x)$, que nunca debería poder aumentar, en la misma forma que no puede hacerlo $L(x)$.
Esta anomalía está presente en la publicación electrónica y en la publicación en papel.
