## Tablas de Mortalidad de la Población Española años 1975-76

INE

Madrid, 1981

### Periodo de referencia: 1975-1976

**Defunciones:** Flujos de fallecidos durante 1975 y 1976, clasificados por edad y generación del Movimiento Natural de la Población (no se consideran Ceuta y Melilla). (pág.-11)  
La distribución por edades fue suavizada mediante el programa X-11 y las series resultantes fueron reajustadas al total de fallecimientos de cada año del MNP, ocurridos dentro del colectivo estudiado en tabla.

**Población:** Población de derecho por sexo y edad a 31 de diciembre de 1975.  
Fuente: "Evolución de la Población Española. 1961-1978" INE 1979. Las poblaciones utilizadas son las de derecho y no se incluye ni Ceuta ni Melilla. (pág.-11)

Los efectivos de solteros, por sexo y edad, se han obtenido para cada sexo aplicando a los efectivos totales a cada edad la proporción de solteros de esa edad obtenida de los datos del Padrón de 1975.  
Los efectivos de no solteros se obtienen por diferencia. (pág.-11)

**Nota:** La estructura de las tablas es diferente de las de 1985-86.
